

# Gas Sensor Testing System

- A fundamental tool for Quality Control and to speed up R&D results
- High throughput. Up to 10 Gas Sensor Heads at once
- Ultra High Purity Gas compatibility
- Simple to use and maintenance free system
- Fully automatic process control

The system has been designed to satisfy the needs of Industry Research Centres requiring the development and the testing of Gas Sensor Heads.

A wet and a dry gas mixture at a controlled concentration are mixed in an UHV cell installed in a climatic chamber.

The system configuration allows the monitoring of concentration, temperature and humidity of a gas mixture in a small volume cell.
